

FRENCH BALCONY RAILING

1. Picture of the product

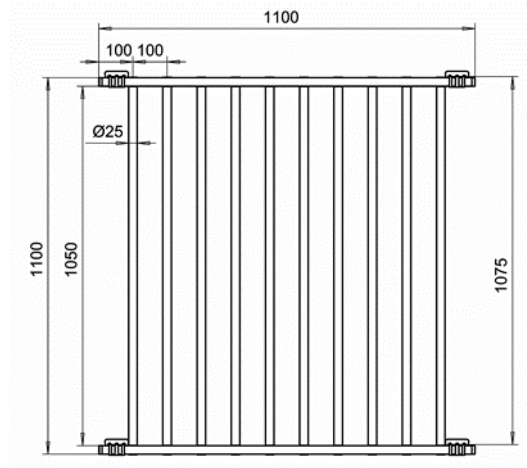

Figure 1. Illustrative photo

2. Product description

The French balcony railing is an easy and care-free solution to prevent falling from doors that lead to a balcony without a landing.

The French balcony railing is made of hot-dip galvanised steel and powder-coated and, therefore, it is resistant to corrosion even in challenging conditions. The requirements of Nat. Building Code F2 have been taken into account in the design. The French balcony railing can be used for balcony door widths of 900 mm or smaller; other dimensions can be made to order.
